

Managed security awareness training (SAT)

Turn security awareness training from a chore to training that your employees will enjoy

Security awareness training (SAT) is essential for addressing the human factor of cybersecurity, meeting requirements set by compliance frameworks and cyber insurance mandates.

The problem with the SAT being delivered today is that it is long, boring and outdated — leading to low completion rates and employee dissatisfaction.

The right security awareness training will help you:

Meet regulatory and industry compliance frameworks	Meet cyber insurance requirements	Improve your organization's security posture
With SAT, you can comply with Soc 2, PCI DSS, GDPR, HIPAA and more.	Meet cyber insurance requirements that include completing SAT. Failure to comply with these terms can lead to denied claims or reduced coverage.	Engaging and informative SAT will encourage a proactive approach to security across the organization.

SOLUTION: ACRONIS SECURITY AWARENESS TRAINING

Acronis Security Awareness Training helps organizations enhance their security awareness and helps them meet cyber insurance requirements, industry-specific regulatory compliance, and supply chain compliance.

Why Acronis instead of managing SAT in house or choosing another vendor?

High user satisfaction	Engaging training content	Outsourced management	Reduced risk	Phishing awareness
Acronis offers a user-friendly, gamified learning management system (LMS). The intuitive and engaging learner console empowers employees to complete mandatory training with ease.	Transform SAT from a chore into engaging content. Deliver fresh, relevant, continuously updated and bite-sized security awareness videos. Enable end clients to upload customized videos for organization-wide broadcast.	Remove the administrative burden of delivering and managing training sessions and phishing simulations. Simplify administration by tracking employee progress and generating reports on the completion of modules, exercises and certificates.	Acronis does not require unsolicited access to end-users' inboxes to run phishing simulations, ensuring privacy and security.	With Acronis, your employees become less likely to fall for phishing and malware and will be trained to recognize, prevent and report social engineering attempts.

TRAINING THAT EMPLOYEES WILL ENJOY

Engaging content

- Bite-sized, easy-to-digest videos.
- Continuously updated with emerging threats and security best practices.
- Simplifies recognition and handling of security incidents for employees.

Courses offered

- Training on security awareness
- Phishing and ransomware
- Social engineering and password safety
- Multifactor authentication
- Device and data management
- Data privacy and compliance (e.g., GDPR)
- Social media and mobile safety
- Safe AI usage
- Domain-specific courses available (e.g., ethics, financial services, remote work)

Smart phishing simulation

- Have emails that mimic real-life social engineering attacks directly to your employees' inboxes.
- Prompt the employees that fail the phishing test to watch a quick training module on phishing

Phishing exercises

- Phishing exercises with interactive quizzes.
- Educate employees on handling specific phishing attempts.
- Prepares users to respond appropriately to security incidents.
- Train employees to identify and resist social engineering tactics.
- Improve user satisfaction, security hygiene and streamline training delivery.

Flexible reporting

- Review completion metrics on the dashboard.
- Drill down to specific reports by department or user.
- Track training progress and phishing results.
- Monitor users' completion status.
- Identify topics needing more focus.
- Have automated reminders sent to employees and managers.

Effortless adoption

- Transform security awareness training into an engaging experience.
- Utilize an intuitive learning management system.
- Ensure high user satisfaction and completion rates.
- Streamlined management and administration
- Offload the stress and admin overhead of managing trainings for multiple employees.
- Leverage bulk operations to deliver and manage training sessions and phishing simulations with just a few clicks.
- Multilanguage support
- Available in 12 languages
